EDUCATION

Massachusetts Institute of Technology

Dual S.M. with Thesis in Computer Science & Technology Policy (fully-funded)

Cambridge, USA

Northwestern University

Dual B.A. in Statistics & Economics with Kellogg Certificate in Managerial Analytics

Evanston, USA

RELEVANT EXPERIENCE

The Organisation of Economic Co-operation and Development (OECD.AI)

2024 – Present

Analyst

Paris, France

- Shaping dissemination and stakeholder engagement for the OECD Hiroshima AI Process (HAIP) Reporting Framework (a G7-backed voluntary AI transparency mechanism), designing outreach to broaden geographical representation and analyzing organizational submissions to distill disclosed AI risk-management and governance practices into accessible findings for policymakers and industry.
- Designing and running multilateral engagement models across Africa, LATAM, Europe, MENA, and Southeast Asia to shape the OECD AI Policy Toolkit; led zero-to-one product management and cross-functional alignment across policy and product teams.
- Spearheaded a global consultation on frontier AI thresholds and emerging AI capabilities in partnership with Oxford/GovAI, achieving the highest engagement in OECD.AI history; analyzed and published findings from 200+ expert inputs. [\[Publication\]](#)
- Co-organized a high-level public-private dialogue on frontier AI thresholds with the UK AI Security Institute at the French AI Action Summit, delivering end-to-end event coordination within an accelerated 4-week timeline.
- Provided substantive technical input to core OECD safety and policy publications, including the AI Capability Indicators, the International AI Safety Report, and regional AI adoption papers.
- Launched and scaled the OECD AI Policy Navigator, expanding coverage to 2,000+ AI policy initiatives across 80+ jurisdictions by coordinating internal teams and 200+ global national contact points.
- Briefed 300+ global policymakers and experts at the OECD Working Party on AI and the GPAI plenary; drafted keynotes and strategic briefing notes for leadership at international forums including APEC 2025 and the French AI Action Summit.

Algorithmic Alignment Group at MIT CSAIL

2021 – 2023

Researcher, AI and Societal Impacts, Advisor: Dylan Hadfield-Menell

Cambridge, USA

- Conducted counterfactual experiments with multi-agent reinforcement learning (PyTorch, Ray RLlib) and agent-based models to demonstrate how individual imitation and social signals shape group learning and cultural inheritance, yielding insights on sociotechnical design and downstream societal impact. [\[Thesis\]](#)
- Authored a [\[position paper\]](#) proposing a research strategy for interdisciplinary collaboration among social scientists, legal scholars, and technologists to address the societal and legal impact of generative AI on visual artists; presented at the GenLaw Workshop, ICML 2023.
- Facilitated workshops for 50+ industry consultants on applying AI foundation models to organizational problems, translating technical concepts into responsible deployment and best-practice guidance.

Olivetti Lab at MIT Department of Material Science and Engineering

2020 – 2022

Researcher, Supply Chain Risk & Sustainability Modeling, Advisor: Elsa Olivetti

Cambridge, USA

- Developed Bayesian hierarchical regression models (PyMC) and dynamic materials-flow models to forecast critical-material demand, reducing parameter-estimate uncertainty by over 50%; nominated for the 2023 JIE Best Paper Prize. [\[Publication\]](#)
- Assessed supply-chain risks and recycling/efficiency strategies while explicitly accounting for price-mediated rebound effects; translated findings into actionable recommendations for senior leadership at a multinational technology firm (NDA), informing sustainability policy and strategic planning.

Interaction Lab at KAIST (KIXLAB)

2020

Researcher, Human-Computer Interaction, Advisor: Juho Kim

Daejeon, Korea

- Conducted mixed-methods research (10 interviews; between-subjects user study, 200+ participants) showing that pluralistic feedback mechanisms beyond simple up/down votes boost engagement and reduce overgeneralization in online deliberation - with implications for the downstream impact of platform design [\[Publication\]](#)

Lab on Innovation, Networks, and Knowledge at Northwestern University

2018 – 2019

Researcher, Computational Social Science, Advisor: Agnes Horvat

Evanston, USA

- Conducted structural and linguistic analyses on 150K+ booking records (R) and designed controlled experiments (Qualtrics, N=1,000) to assess how reputation-system design influences user trust, societal impact, and community sustainability. [\[Publication\]](#)
- Designed and coordinated large-scale behavioral experiments (Qualtrics, N=1,250), generating evidence-based insights into how crowd signals influence individual decisions and platform performance. [\[Publication\]](#)

SKILLS, AWARDS, & SERVICE

Selected awards & scholarships: Social and Ethical Responsibilities of Computing (SERC) Scholar, MIT (2020); National Hangeul Product Competition Prize (\$15,000, South Korea's Ministry of Culture, Sports and Tourism, 2018); KSEA Scholarship, Korean-American Scientists and Engineers Association (2019)

SERVICE: Reviewer, NeurIPS Ethics 2023 & ICML 2023; Conference Volunteer, FAccT 2022, CHI 2021, DIS 2021
